

C-View™ Night Vision

**WIDE FIELD OF VIEW NIGHT VISION DEVICE
FOR IMPROVED SITUATION AWARENESS**

The C-View™ Monocular Night Vision Device (MNVD) provides a 220° field of view (FOV) to a standard night vision monocular PVS 14. It provides users with an ultra-wide FOV in place of the 40° FOV of a typical MNVD. InterScience's C-View™ MNVD provides enhanced night time navigation capabilities and improved situational awareness.

C-View™ MNVD Image Captured through PVS 14 - red dotted circle represents standard 40° field of view
